<<Interview Questions and Answers>>

Inventory Procurement and Reorder System

Objective:

The purpose of the interview is to understand the current inventory and procurement process, identify existing problems, and determine the requirements of the proposed system.

Type: Open-Ended Questions

Question 1:

How do you currently manage inventory in your organization?

Answer:

We use spreadsheets and manual records to track products and stock quantities.

Question 2:

What are the main problems you face when managing inventory?

Answer:

The main problems are human errors, inaccurate stock records, and difficulties tracking products.

Question 3:

How do you determine when a product needs to be reordered?

Answer:

We check stock quantities manually and reorder products when their quantities become low.

Question 4:

How do you manage the procurement process?

Answer:

We contact suppliers, compare prices, and place purchase orders manually.

Question 5:

What information do you need when creating a purchase order?

We need the product name, quantity, supplier information, price, and expected delivery date.

Question 6:

How do you track supplier performance and deliveries?

Answer:

We review purchase records and contact suppliers to check delivery dates and order status.

Question 7:

What happens when a product is out of stock?

Answer:

We may delay orders until the product becomes available again.

Question 8:

How do you identify products with low stock levels?

Answer:

We review inventory records regularly and compare current quantities with minimum stock levels.

Question9:

What reports would help you improve inventory management?

Answer:

Reports showing current stock, low-stock products, purchase orders, and supplier performance would be useful.

Question 10:

What improvements do you expect from the proposed system?

Answer:

We expect better accuracy, automatic reorder notifications, faster procurement, and improved inventory control.

Type: Closed-Ended Questions

Q1:

Do you currently use an inventory management system?

Q2:

Do you experience problems with inventory accuracy?

*Q3:

Are stock quantities updated automatically?

Q4:

Do you need automatic notifications when stock levels are low?

Q5:

Should the system help employees create purchase orders?

Q6:

Is supplier information currently stored in a centralized database?

Q7:

Should the system track the status of purchase orders?

Q8:

Do you need reports showing current stock quantities?

Q9:

Should the system validate purchase quantities before confirming an order?

Q10:

Would you prefer an automated inventory and reorder system?
